

# Coverage for Preventive Services

Independence Blue Cross (IBC) encourages members to take action and to engage in preventive health care to help avoid illness. Currently, members pay for preventive services through copayments, coinsurance, or coinsurance and deductibles. Some services, like pediatric immunizations and mammograms, are typically covered with no out-of-pocket costs.

Effective October 1, 2010, health plans are required to cover certain preventive health services to their members without cost-sharing; therefore, IBC will begin covering certain preventive services including colorectal cancer screenings, high blood pressure screenings, and osteoporosis screenings, with no out-of-pocket costs to members, regardless of plan type.

Utilizing guidelines recommended by the U.S. Preventive Services Task Force, Centers for Disease Control, Centers for Medicare and Medicaid Services, and New Jersey Minimum Standards, IBC has developed a list of preventive services that will apply consistently across Pennsylvania, New Jersey, and Delaware.

The complete list of preventive services is listed below. Please note that for groups seeking to maintain their grandfathering status, adding 100 percent coverage for preventive services will not alter this status.

## Preventive Evaluation and Management/Counseling

Preventive Service	Frequency/Demographic
Pediatric and adult preventive exams	All demographics
Initial preventive physical exam (IPPE)	Medicare/CMS
Preventive GYN exams	Women
