DOUBLE TAKE

SELECTED VIEWS FROM THE PHOTOGRAPHY COLLECTION AT BRYN MAWR COLLEGE, 1860s–PRESENT
DOUBLE TAKE

SELECTED VIEWS FROM THE PHOTOGRAPHY COLLECTION AT BRYN MAWR COLLEGE, 1860s–PRESENT

Carrie Robbins

September 27–December 22, 2011
BRYN MAWR COLLEGE
Class of 1912 Rare Book Room, Canaday Library
The exhibition and publication were made possible through the generous support of the Friends of the Bryn Mawr College Library. Carrie Robbins’s work was supported by the Mary Patterson McPherson Curatorial Internship awarded by the Graduate Group in Archaeology, Classics, and History of Art at Bryn Mawr College. Carrie Robbins’s work was supported by the Mary Patterson McPherson Curatorial Internship awarded by the Graduate Group in Archaeology, Classics, and History of Art at Bryn Mawr College.

The collections of historical, cultural, and artistic objects at Bryn Mawr College have been central to the school’s educational mission since its founding in 1885. Among these, perhaps the photography collection, established in the late nineteenth century as a collection of “study photographs,” has been most closely linked with teaching. One of the first donors to this collection was Bryn Mawr’s second president, M. Carey Thomas. Many of the nineteenth-century photographs—including several in this exhibition by pioneers such as Adolphe Braun, Francis Frith, and Pascal Sébah—are marked as having come from Thomas’s collection or that of the college’s early benefactor Mary Elizabeth Garrett. Although Thomas and Garrett, who most likely acquired these photographs during their tours of Europe and the Middle East, intended the images for educational purposes—as illustrations of the art, monuments, and sites central to the study of many academic disciplines within the college—they almost certainly recognized the photographers’ great technical and aesthetic achievements.

During the twentieth century the photography collection grew through generous gifts, which included works by modernists Ansel Adams, Walker Evans, Lewis Wickes Hine, Lotte Jacobi, André Kertész, Edward Steichen, Paul Strand, and Edward Weston. Additionally, Philadelphia collector Seymour Adelman’s major donation to Bryn Mawr contained a large and important group of photographs by and of American artist Thomas Eakins. Although the college’s collection now comprises an estimated ten thousand photographs and spans almost the entire history of photography, there remain myriad opportunities for research as well as for enhancing the collection’s breadth and depth.

Double Take: Selected Views from the Photography Collection at Bryn Mawr College, 1860s–Present would not have been possible without the scholarship and diligence of Carrie Robbins, doctoral candidate in history of art, who as the graduate assistant in the Department of Special Collections in 2009–10 catalogued and researched over one thousand photographs, and whose work on this exhibition and publication has been funded by the Mary-Patterson McPherson Curatorial Internship awarded by the Graduate Group in Archaeology, Classics, and History of Art. Nathanael Roesch, graduate student in history of art and Friends of the Library intern, has ably assisted with all aspects of the project. We are grateful to Kristen Grubits, who catalogued hundreds of photographs; Friends of the Library undergraduate intern Maria Aghazarian and Hyunugee Kong for their assistance with countless tasks related to the exhibition; Camilla MacKay, head of Rhys Carpenter Library, who provided excellent editorial assistance; Marianne Weldon, collections manager, who coordinated the final phases of the exhibition; and Professor Steven Z. Levine for his invaluable advice throughout the project. Finally, we are indebted to the Friends of the Bryn Mawr College Library, whose support of Bryn Mawr’s exhibition program makes possible the display, scholarly documentation, and publication of the school’s rich holdings.

This is the first exhibition to draw exclusively upon Bryn Mawr’s photography collection. We hope it provides visitors a glimpse of the richness of the collection and inspires students and scholars in future explorations.

EMILY CROLL
Curator/Academic Liaison for Art and Artifacts

ERIC PUMROY
Director of Library Collections and Seymour Adelman Head of Special Collections
By photographing the Belvedere Torso twice, from the front and from the back, the French studio of Adolphe Braun & Co. aimed to reproduce the ancient sculpture as fully as possible (figs. 1, 2). The studio’s reproductions of the torso, taken in situ at the Vatican Museums in 1869, not only make the work of art accessible to a worldwide audience, but also recreate the experience of walking around the sculpture. Similarly, in the 1940s when collector Vladimir G. Simkhovitch hired Hungarian-American photographer André Kertész to document his collection of ancient Mediterranean art, Kertész employed multiple views to reproduce an Etruscan bronze cauldron—the front, a detail, and the bottom, which he achieved by reorienting the vessel to shoot it from above (figs. 3–5).

While photographing an object from many points of view might seem like an obvious tactic, it is not given. It reflects a particular choice, just as each image within a series represents a particular choice. Of the viewpoints Kertész employed, Braun elected only the front, not the bottom or a detail, view. Whereas Braun used two points of view, Kertész used three; the comparison alerts us to a missing possibility for Braun’s version of the Belvedere Torso. While a photographic series may try to reproduce a three-dimensional object in full, the photographer’s choices necessarily fragment viewers’ access.

Although the goal of photographic reproductions of art that are created for study or cataloguing purposes is neutral documentation, even here, the photographers, through their decisions, intervened. By accepting such documentary efforts as straightforward and objective, we look past the photographer’s agency and participate in the fantasy that the photograph is a substitute for the object itself. Double Take focuses on pairs or small groupings of photographs that are similar in form or content, not to equate them as doubles, but to draw attention to the photographic interventions that make them different. Seen together, the photographs’ similarities and differences cause a double take, prompting us to look again and more closely.

In 1908 American photographer Edward Steichen reproduced a three-dimensional object—Auguste Rodin’s hulking sculpture of French writer Honoré de Balzac (Monument to Balzac, 1898, cast 1954; Museum of Modern Art, New York)—through a series of images (figs. 6–8). While the seeming neutrality of Braun’s and Kertész’s photographs discussed above disguises the photographers’ artistic interventions, in Steichen’s series we recognize more readily his artistry, above and beyond that of Rodin’s. His use of soft focus and his decision to photograph at night obscure the legibility of the sculpture. Moreover, Steichen played with our expectation of objectivity in photographic art reproduction by disrupting the cohesion of the series through the inclusion of one vertically oriented photograph, in contrast to the horizontal orientation of the other two; and by changing, for each image, the camera distance, the exposure time (ranging from fifteen minutes to an hour), the interval between exposures, and the framing of the sculpture. At the time, Rodin’s Monument to Balzac was a rejected commission that remained a plaster model in the artist’s studio. By photographing the sculpture outside, on the terrace adjacent to Rodin’s studio, Steichen cast the yet uncast sculpture as a monumental fixture set against a changing nighttime sky. Insofar as the photographs obscure the legibility of the sculpture it is perhaps surprising that, as Steichen later recalled, Rodin found them appropriately representative of his work, remarking, “you will make the world understand my Balzac through these pictures.” By obscuring the sculpture, Steichen’s images help us understand that Rodin did not mean the portrait to be an exact likeness of the French novelist. More than this, Steichen helps us understand something about the nature...
of photography: he borrowed Rodin’s work just as the moon, under which he photographed, borrows the light of the sun, by reflecting it as its own. In doing so, he shows us photography’s distinct position between production and reproduction, between art and nature.

The title of each photograph includes a time stamp—11 P.M., midnight, and 4 A.M.—allowing us to see Steichen’s series as a representation not only of space, but also of time. The irregularity of the intervals, however, alerts us to the gaps between the reproductions, perhaps signaling the inability of any series to accomplish an exact reproduction of a subject in time. This type of serial reproduction was the project of British photographer Eadweard Muybridge, whose motion studies sought to document animal and human movements in time. For his first efforts, published in 1877 by Scientific American, Muybridge used several stereoscopic cameras with shutter speeds of one one-thousandth of a second. His photographs show the world as it had never been, and has never been, seen by the human eye. Through his photography we learn that the gait of a galloping horse includes a point when all of the animal’s feet are off the ground. Muybridge used the camera as a tool, more accurate than the human eye, to capture phenomena unverifiable by humans. Insofar as his photographs reveal the world as it is not seen, they can be understood to abstract, at least as much as they represent, it. This exhibition pairs one of Muybridge’s Animal Locomotion sequences, comprising twelve photographs of a man walking while doffing his hat, with ten photographs of a woman dancing, using her hat as a prop, by German-born American photographer Gerda Peterich (figs. 9, 10). Peterich documented an otherwise ephemeral performance, creating the type of archive that has made possible a history of dance. But just as photographic reproductions of works of art alter the three-dimensional nature of the objects they represent, Peterich’s photographs change the nature of dance by abstracting the lyrical movements into still fragments.

Yet photography’s illusionism persuades us to overlook abstractions like these, thus convincing us to entrust the medium with the task of accurate representation. For American photographer Lewis Wickes Hine, the truth-telling capacity of the camera endows photographers with great moral responsibility. In his 1909 essay, “Social Photography,” Hine writes that “while photographs may not lie, liars may photograph.” Hine recorded immigrants at Ellis Island, as well as working and living conditions throughout the United States and other parts of the world. He hoped that his “positive documentation” would portray the “human side of the system,” thereby disproving the popular Industrial Age notion that machines run themselves. Paradoxically, the most effective way for Hine to gain the trust of his viewers was to disguise the human side of his machine, his photographic interventions. While Hine’s purpose was to objectively document conditions of life and work in the early twentieth century, the camera did not do all the work. He decided which subjects to portray and how to compose and frame the images, so that they informed and moved viewers. In Social Worker Visiting Slum Family, ARC/USA of 1926, Hine photographed an American Red Cross aid worker whose social-reform efforts mirrored his own (fig. 11). The exhibition pairs this photograph with an image similar in subject matter by Philadelphia-based photographer A. Crawford G. Allison (fig. 12). In Allison’s image, an unidentified man with a camera in hand stands with a uniformed worker in front of a doorway. The presence of this photographer reminds us of Hine’s unseen presence—Hine, too, stood in front of a doorway, but remained behind the camera—in the creation of his image.

Remembering the interventions of the photographer becomes critical when, as Hine put it, liars photograph. While lying, which implies an intention to deceive, might be too strong a charge, photographers cannot help but bring their worldviews, including their moral assumptions and prejudices, to their “viewfinders.” Between 1907 and 1930 Edward S. Curtis, an American commercial photographer supported by financier J. P. Morgan, published twenty volumes of photographs surveying what he characterized as the “vanishing race” of North American Indians. Curtis’s images, however, betray that his interest in aestheticism outweighed his interest in documentation; his soft-focus and sentimental representations, indicative of the Pictorialist style, obscure the details of his subjects. Moreover, he often staged photographs, incorporating into his compositions anachronistic or culturally inaccurate costume or artifacts. In this way, Curtis’s photographs reveal his romanticism of American Indian life more than they document a particular tribe or individual.
In the exhibition, Curtis’s Depositing a Prayer Stick from 1921 (fig. 13) is grouped with works by Turkish photographer Pascal Sébah and by American photographer William E. Williams, to consider the ways in which historically othered peoples have been represented. Sébah, who established his first photography studio in Constantinople in 1857 and his second in Cairo in 1873, collaborated with French technician A. Laroche, who made albumen prints from Sébah’s glass plate negatives. Sébah’s photograph Safahin Carrying Water, from the 1870s, shows a group of rural women retrieving water from the Nile (fig. 14). The blurry figure of a little boy at the right suggests the technological limitations of photography’s then three-second exposure time, which would have required Sébah’s subjects to be unnaturally still—or posed. Perhaps Sébah staged the scene to present an Orientalist fantasy of the East to a Western audience. Indeed, many of his photographs were seen by Western audiences at the 1873 and 1876 world expositions, in Vienna and in Philadelphia, respectively. In 1893 Sultan Abdülhamid II presented photographs by the descendant firm Sébah & Joaillier to United States President Grover Cleveland. Moreover, many tourists—perhaps including M. Carey Thomas, first dean and second president of Bryn Mawr College, during her sojourns to Egypt in 1910 and 1928, or to Turkey in 1919—purchased prints by both photographers as souvenirs. Sébah’s picturesque image of peasant women laboring may have supported the West’s conception of the outmoded East, but Sébah & Joaillier’s photographs of modern innovations, such as mechanical fountains and railroads, presented photographs by the descendent firm Sébah & Joaillier to united States President Grover Cleveland. Moreover, many tourists—perhaps including M. Carey Thomas, first dean and second president of Bryn Mawr College, during her sojourns to Egypt in 1910 and 1928, or to Turkey in 1919—purchased prints by both photographers as souvenirs. Sébah’s picturesque image of peasant women laboring may have supported the West’s conception of the outmoded East, but Sébah & Joaillier’s photographs of modern innovations, such as mechanical fountains and railroads, in Constantinople and Cairo would have complicated this notion.

My experience with Bryn Mawr’s photography collection has been a powerful reminder of the ways in which photographs conceal as much as they reveal. Their hidden meanings, unlike their subjects, are not frozen; rather, they accrue over time. As such, photographs require our continual reanimation of and speculation about the conditions of their production and reception. This exhibition is one such reanimation. It is a kind of snapshot, a suggestion of the breadth and richness of the college’s collection. The pairings and groupings I have selected recreate, to a degree, my initial encounters with these photographs, by demonstrating how they initially withheld their meanings from me, challenging me to discover some of them over time and through repeated viewings. On behalf of the Department of Special Collections at Bryn Mawr College, I hope that this exhibition of double takes is instructive and generative, and that it inspires viewers to look more closely and to find meanings not visible at first glance.

CARRIE ROBBINS
Mary Patterson McPherson Curatorial Intern

1. Kentaur’s caisson series also includes one vertically oriented image among two horizontally oriented ones; however, the ostensible neutrality of these photographs tempers the effect of the disruption.
4. Edward S. Curtis, The North American Indian: Being a Series of Volumes Picturing and Describing the Indians of the United States and Alaska, ed. Frederick Webb Hodge, with a foreword by Theodore Roosevelt, 20 vols. (Cambridge, MA: University Press, 1907–30). The first plates of volume one, Vanishing Race—Navajo (1904, published 1907), optimizes Curtis’s social Darwinist attitude, which postulated that cultures were destined for evolutionary contexts in which some triumphed and others became extinct. An electronic edition of Curtis’s publication has been made available by the Northwestern University Library (http://digital.library.northwestern.edu/curtis/).
