Stage 2: Create Survey.
Compose 6 – 10 survey questions including at least 3 that require numerical responses. Make sure your questions are not as biased as those appearing at the beginning of the “Avoiding Biased Survey Questions” handout. Also keep in mind that people will be completing your survey quickly. Brainstorm ways to obtain the information you want without requiring that students spend a lot of time thinking about their answers.

Assignment:
Go to www.SurveyMonkey.com, and click the yellow button that says “Get Started Now”. If you do not already have an account, you will have to create one. (You can do so for free.) After you log in, click the button that says “Create Survey”. Choose “Build a New Survey from Scratch”, and fill in a “Title” for your survey that includes the names of everyone in your group. Click the “Let’s Go!” button.

You should now find yourself on the “Design Survey” page. The “Builder” on the left side allows you to add different types of survey questions. Experiment with the software to see what it can do. You can go back and edit questions after you've saved them. You can also move and delete questions. The free version of SurveyMonkey lets you include up to ten questions per survey.

When you are satisfied with your survey, click the tab labeled “Collect Responses” on the top right of the page. Choose “Web Link Collector”, and then click the ”Next” button. Copy the link provided and email it to me at anmyers@brynmawr.edu.

Finally click the small triangle next to “Anonymous Responses”, and then choose to have this option “On”.
