Term Project Stage 6  
Math 104  
Fall 2015  
Myers  

**Stage 6: Discuss Bias.**  
Since our class is *not* a simple random sample of Bi-Co students, any conclusions you have drawn about Bi-Co students based on data obtained from our class could be biased. In addition, nonresponse, question wording, and other circumstances under which the survey was conducted could have affected your results. Discuss how the various sources of bias may have affected any conclusions you have draw about Bi-Co students. How do you think your results might change if they were unbiased?
