Instructions for Test Redo:

1. You may redo any question you did not get a M (mastery) on in the Midterm.

2. For any question you want to redo you must:
   a. Write up the correct answer to the question. Also include a statement about what you need to remember so you won’t make the same mistake again. This write up should be on a separate piece of paper. Hand them in together with your test.
   b. If you received a U or T on the question, you need to do the appropriate HW problem for that question and hand that in.
   c. If you received a T/NM, then you decide if you need to do the HW problem. The logic is that if your mistake was an arithmetic mistake or leaving out the explanation (but you knew the explanation), then you do not need to do the HW problem. If there was something you did not understand, then you should do the HW problem. You must include an explanation of your decision though in what you hand in.

These materials must be handed in by class on Wed Oct 29th. Hand them to Professor Donnay. Do not mix them in with the regular homework.

3. After you hand in these materials, you can take the Redo Test. You will only need to redo the problems you did not Master (not the whole test). The test redo is due by Monday Nov 3 at the start of class (at the latest). When you hand in the redo, also hand back in your original test.

Grading Scheme:
- M = full credit
- NM = minus 1 or 2 pts
- T = half credit
- U = no credit.

Adding up these points, A > 90 %, B > 80%, C > 65%.

I allow and encourage you to work with your classmates to prepare for the redo and to correct your mistakes.

Help Session with Prof Donnay on Friday Oct 24 from 3 – 4:30 pm.
