Preparation for Mid-term Exam. For Monday, please do the following:

1. Make a list of the topics/sections we have covered. The last topic on the exam will be Applications of the Exponential Function (S. 7.5). For each topic, self assess your knowledge (M, T, U). When you give me your list, I will give you my list. (To hand in, separate from the regular hw).

2. Indicate the topics you would particularly like us to review before the test.

3. Make up a problem similar to what you expect will be on the test. Also write up an answer key to the problem. Write these on a separate piece of paper. I will use these problems when making up the review sheet and I might include some of these problems on the test. (To hand in, separate from the regular hw).

4. On Wed, I will give you a set of review problems which you will do by Friday. We will go over these problems in class on Friday.

5. At the end of class on Friday, I will give you the take home mid-term. It will be due back at the start of class on Monday. You will be able to use an index card on which you write formulas.
