Final Project Rubric  
Math 102 Fall 2006

Mechanics:
- Introductory paragraph in which you explain what you are doing in the project.
- Paper written with complete sentences, correct spelling and punctuation.
- Either type written (can do math equations by hand) or neatly by hand on lined paper.

Content:
- the mathematics in the paper is correct and
- the reader can follow and understand the mathematics being described because the author:
  - states clearly what the variables represent and what the units are.
  - shows clearly the steps used in solving the problem. (You must use your judgment as to when you can skip over a very simple step and when you should show the step.)
  - includes, when appropriate, diagrams to illustrate the problem and the explanation. Diagrams are clearly labeled.

Reflection Component:
Each partner will fill in a project reflection form. As part of this form, they will evaluate their and their partner’s contributions to the project.
