

D2W: DIR-TO-WWW

A web page generation program

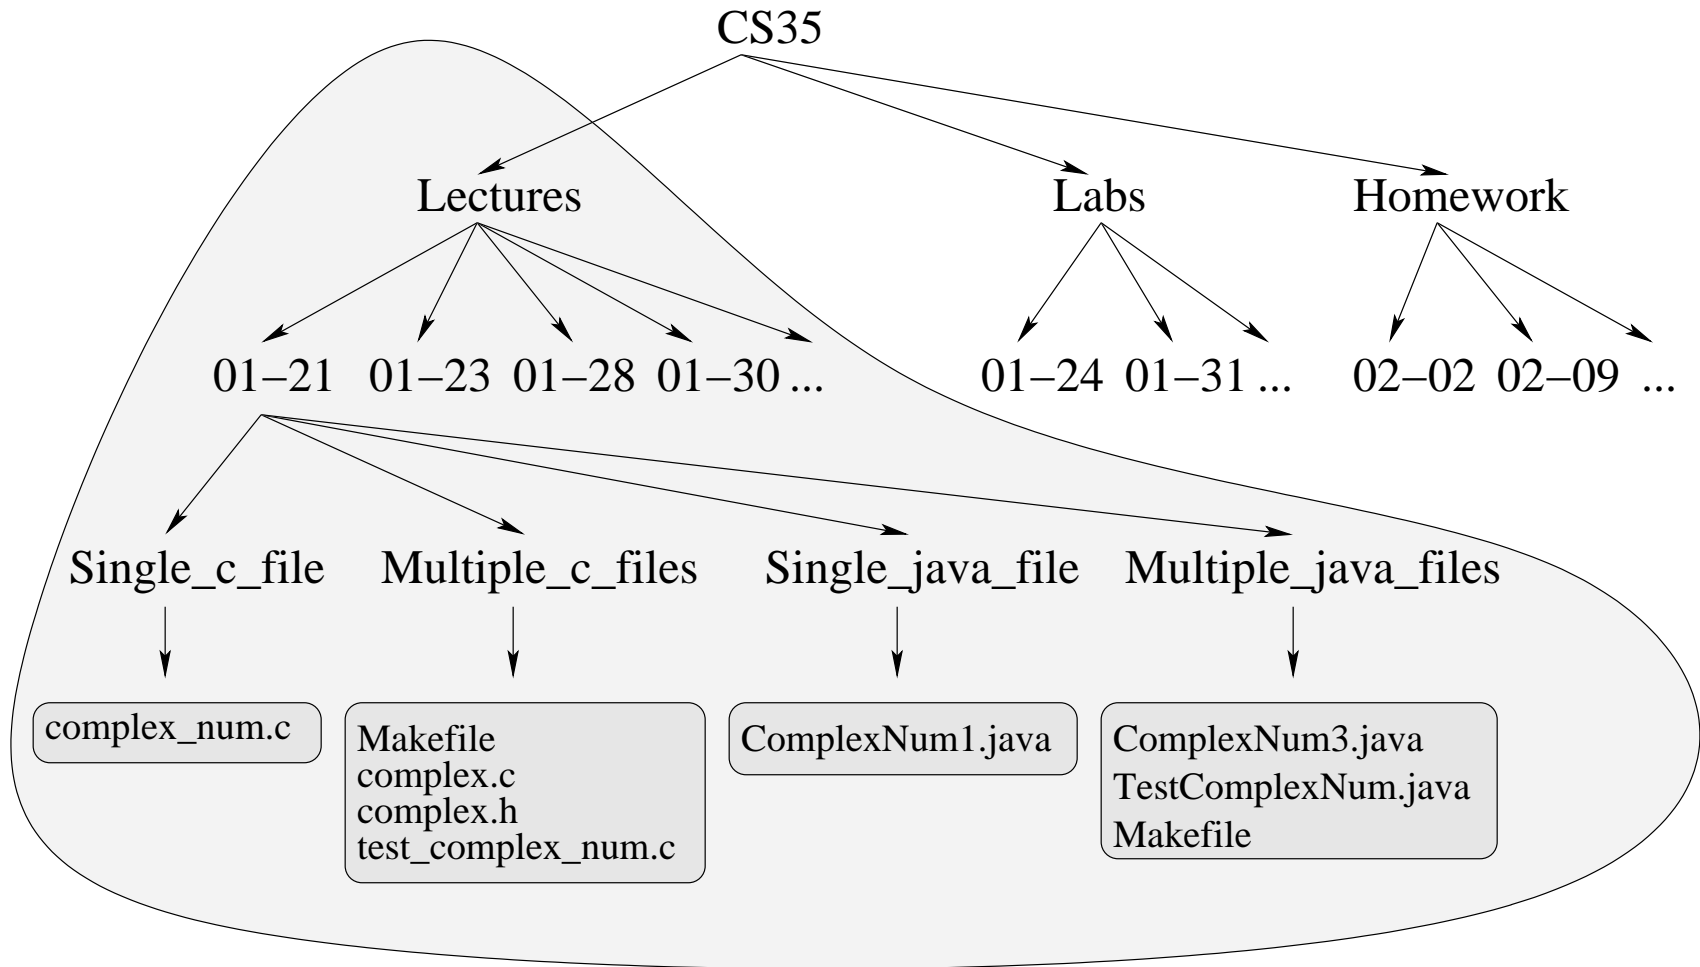

- Goals**
- Simplification of the process of making large sets of files available over the WWW
 - Operation in a non-intrusive way requiring minimal modifications to the original files
 - Generation of HTML code that is easy to read and edit by hand

- Operation**
- Draws web page content from tagged segments of information within files
 - Draws web page structure from directory layout of the files
 - Works as a command line utility on UNIX systems
